

Problems (Vectors)

1. Find the unit vector along $a = (2,3,1)$
2. Find the angle between the two vectors $a = (3,4)$ and $b = (-4,3)$
3. Find the projection of $a = (3,4)$ on $b = (6,8)$
4. If $a = (c,1,1)$ is perpendicular to $b = (c,2c,1)$ then find the value of c
5. If the projection of $a = (5,12)$ along a vector b is 7, then what is the projection of a on a vector perpendicular to b ?
