Product Cd	Contract month	Ticker	Description
SR3	H3	SR3H3	RFR USD 3M SOFR Futures MAR-2023
SR3	M3	SR3M3	RFR USD 3M SOFR Futures JUN-2023
SR3	U3	SR3U3	RFR USD 3M SOFR Futures SEP-2023
SR3	Z3	SR3Z3	RFR USD 3M SOFR Futures DEC-2023

CME Future Basics

- CME futures are extremely liquid and are used massively for trading and hedging and building the short end ($T < 1$ year) of the yield-curve. Below are some key numbers on CME future contracts.

Ticker	Description	CCY	Contract Size	Contract Period(M)	Tick Value ¹	Initial Margin	Term Rate
ED	USD 3M LIBOR Futures	USD	1,000,000	3	25.00	2,500.00	Simple
SR1	USD 1M SOFR Futures	USD	5,000,000	1	41.67	2,500.00	Arithmetic
SR3	USD 3M SOFR Futures	USD	1,000,000	3	25.00	2,500.00	Geometric
L	GBP 3M LIBOR Futures	GBP	1,000,000	3	12.50	2,500.00	Simple
SO3	GBP 3M SONIA Futures	GBP	1,000,000	3	25.00	2,500.00	Geometric
ER	EUR 3M LIBOR Futures	EUR	1,000,000	3	25.00	2,500.00	Simple
EON	EUR 1M ESTR Futures	EUR	1,000,000	1	25.00	2,500.00	Arithmetic
IT	JPY 3M TIBOR Futures	JPY	100,000,000	3	2,500	250,000	Simple

¹ The tick value per basis point (bps), also known as the basis point value (BPV)

- The ones highlighted in yellow are LIBOR based futures which are discontinued. In our examples, we will focus on SOFR 3M and SOFR 1M Futures.

Price Basis and Tick Value

- ▶ **Price basis** of the SOFR Future contract and the referenced rate are inversely proportional. The Price basis or **IMM index** given as

$$\text{Price Basis} = 100(1 - R)$$

- ▶ The **Tick value** represents the change in value of the future contract for 1 basis point change in the reference rate. It's defined as

$$\text{Tick Value} = \text{Contract Size} \times \text{Contract Period} \times 0.01\%$$

Exercise – Show that the tick value for SR3 and SR1 are \$25 and \$41.67, respectively.

Daily Variation Margin

- The Future daily variation margin calculation can be performed easily based on the daily basis point movement and the tick value applicable to the contract. Below is the PnL for a SR3 future contract

Future Daily Variation Margin

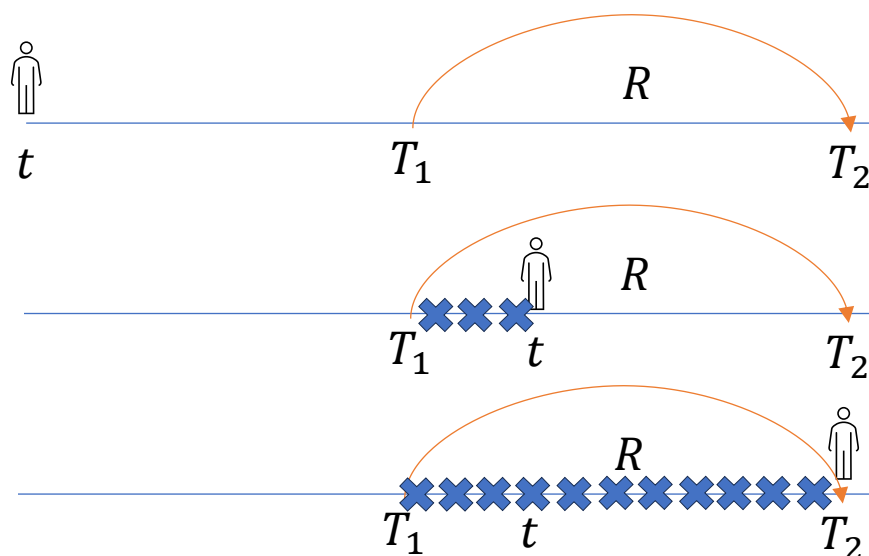

Number of Futures

10

Date	Price	Rate (%)	+/- (bps)	Margin Balance	PnL
Mon, 20-Jun-22	99.00	1.00	1	\$ 25,200	\$ 25.00

		\$ 200.00			

Rate implied by SOFR Future

- ▶ What does the reference rate underlying a SOFR Future contract represent ? It represents the market expectation of the term rate for the contract period. However, the realized term rate that is part of the final settlement won't be fully known until the end of the contract. So, as one enters the reference period, the term rate implied by SOFR future represents a hybrid of realized SOFR rates up to that point and market expectation of the rates for the remaining period.
- ▶ Note that the term rate for settlement is calculated using average daily rates over the period. **SOFR 3-month** futures use a **compounded average** whereas **SOFR 1-month** future use an **arithmetic average**.

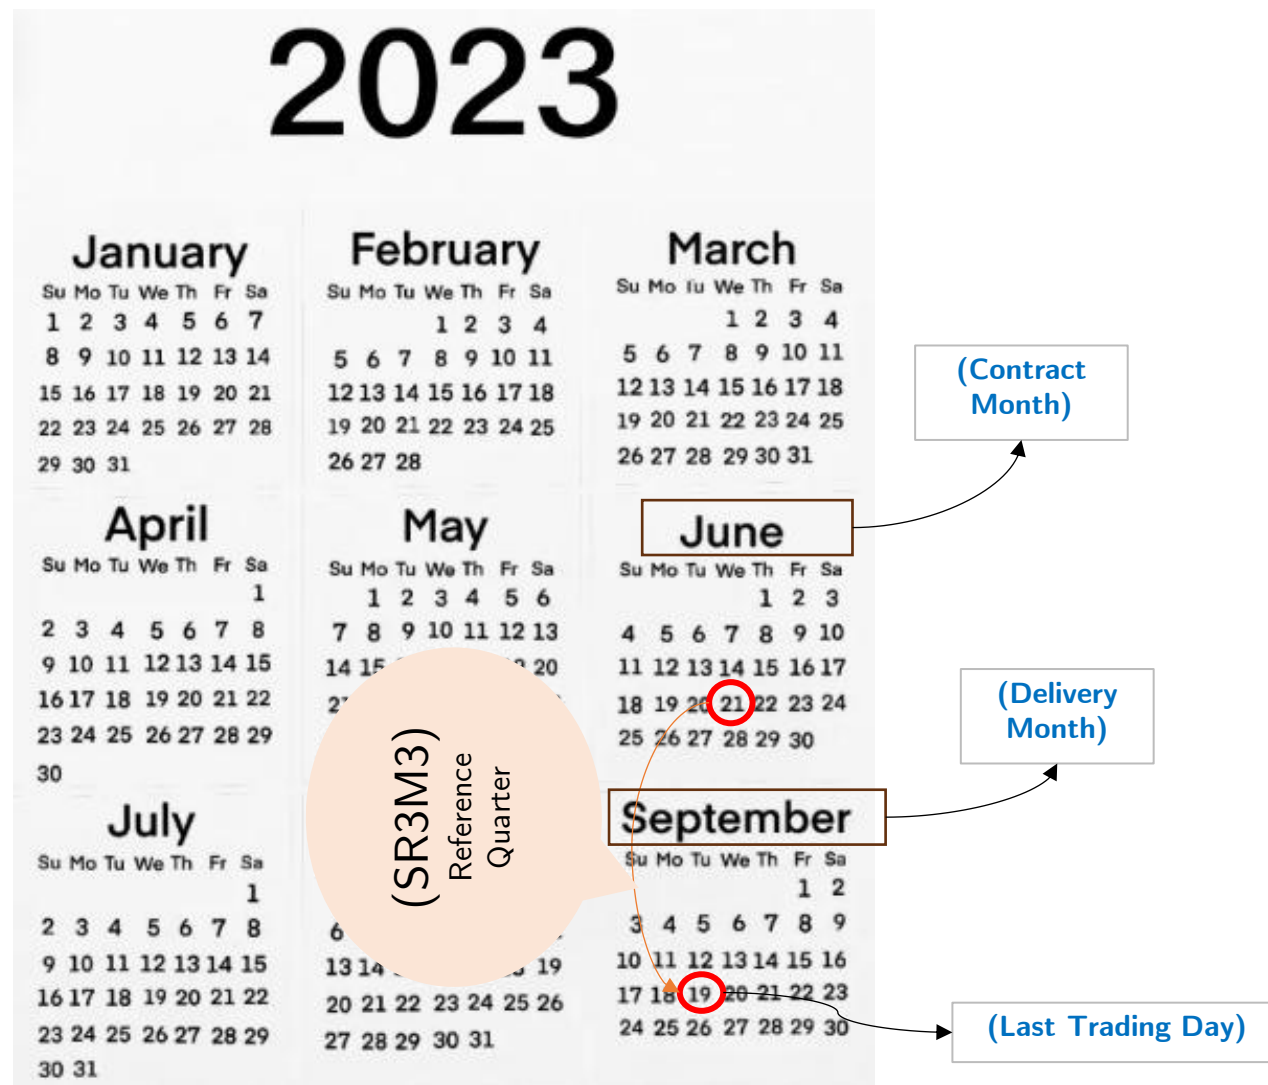

(Pure expectation)

(Hybrid expectation)

(Complete realization & Final Settlement)

SOFR 3-month Future – Contract period

- ▶ **Reference Quarter** – The 3-month SOFR future follows the IMM calendar (3rd Wednesday of Mar, Jun, Sep, Dec). The Reference Quarter is the interval from the 3rd Wednesday (inclusive) of the month three months prior to the delivery month, to the 3rd Wednesday (exclusive) of the delivery month.
- ▶ For example, the product SR3M3 spans from 21st June 2023 (Inclusive) to 19th September 2023 (exclusive)

SOFR 3-month Future – Settlement

- ▶ The final settlement is based on compounded average of daily rates in the reference period. The handling of non-business days follows the standard SOFR compounding convention i.e.,

$$R = \left(\prod_{i=1}^{N_b} (1 + r_i \tau_i) - 1 \right) / \tau_c$$

- ▶ The annualized rate is rounded to 1/100th basis point. The final settlement price is calculated as

$$\text{Price Basis} = 100(1 - R)$$

SOFR 3-month Future – Settlement (Example)

Annualized Rate
Round to 1/100th BP
Settlement Price

5.239595%

5.23960%

94.7604

$$R = \left(\prod_{i=1}^{N_b} (1 + r_i \tau_i) - 1 \right) / \tau_c = \left(\frac{\text{Index}_t}{\text{Index}_{t_0}} - 1 \right) \times \left(\frac{360}{d_c} \right)$$

(Delivery Month)

- **Contract Period** – The 1-month SOFR future spans all the calendar days of a month which is called the delivery month.

SOFR 1-month Future – Settlement

- ▶ The final settlement is based on arithmetic average of daily rates in the reference period. For non-business days the prevailing SOFR rate applies.

$$R = \left(\sum_{i=1}^{N_b} r_i \tau_i \right) / \tau_c$$

- ▶ The annualized rate is rounded to 1/10th basis point. The final settlement price is calculated as

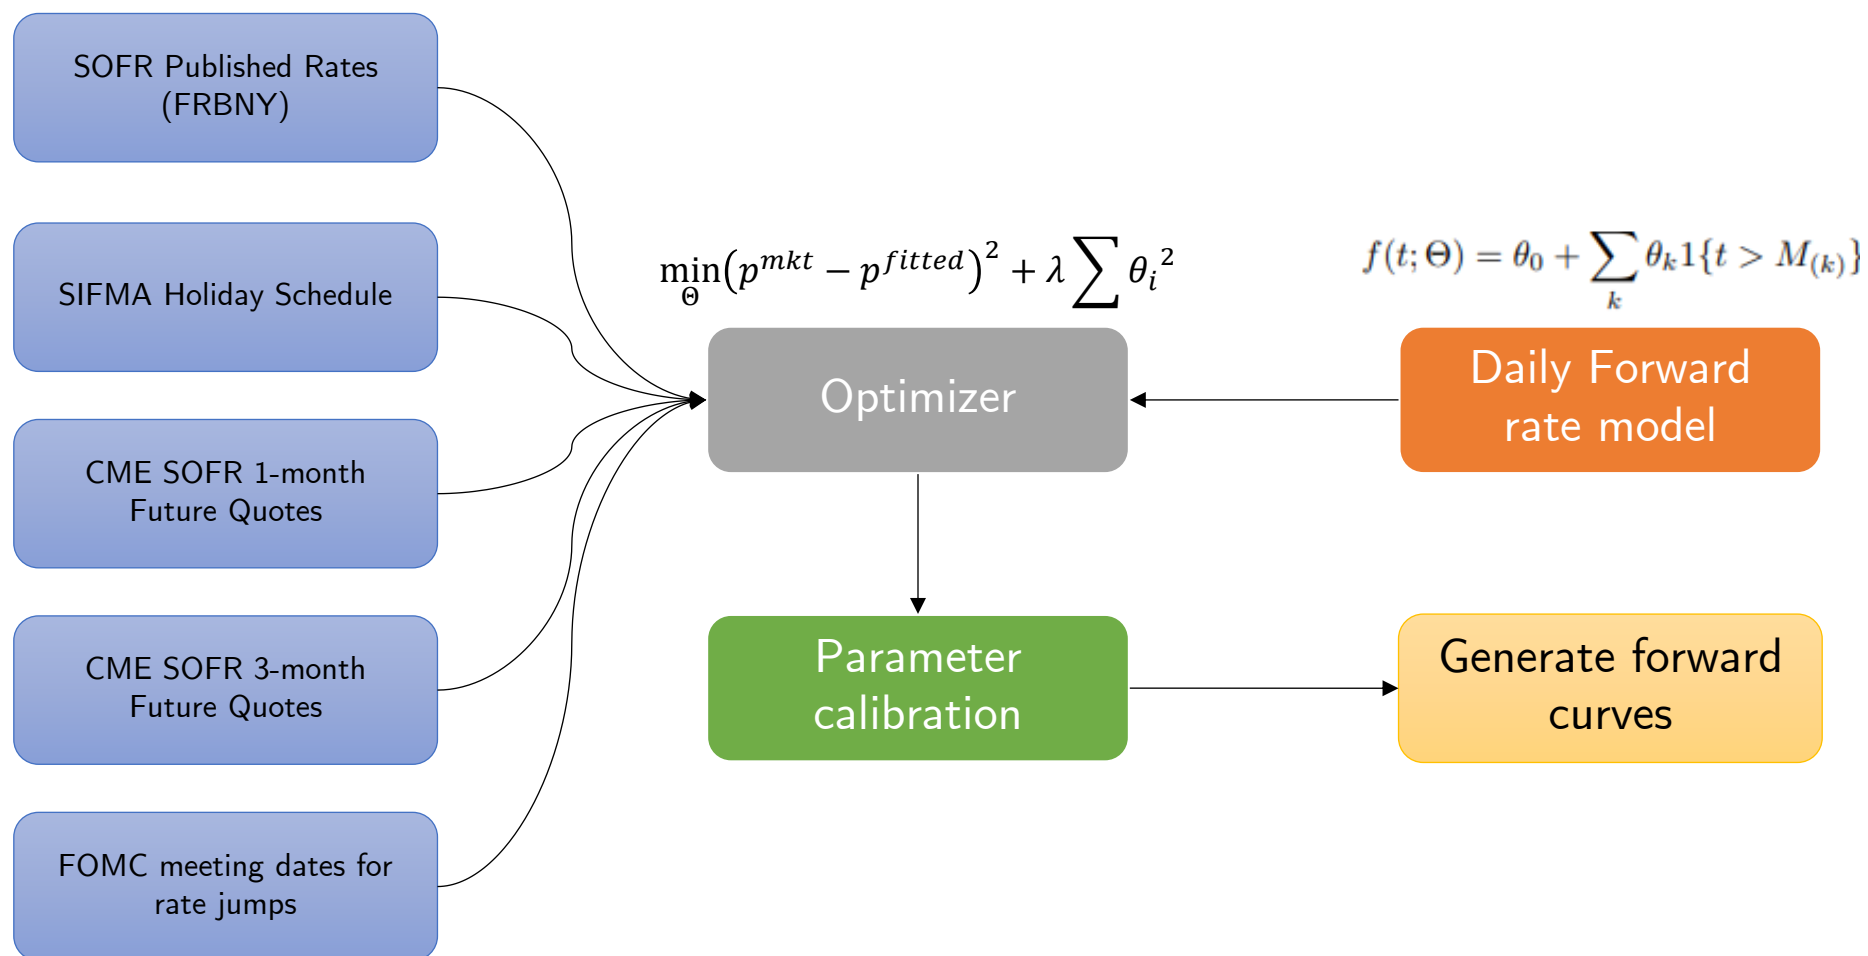

$$\text{Price Basis} = 100(1 - R)$$

SOFR 1-month Future – Settlement (Example)

Annualized Rate	5.098387%

- ▶ SOFR 3M Future uses compounded average of SOFR rates between IMM dates whereas SOFR 1M Future uses arithmetic mean of the SOFR rates for the delivery month
- ▶ Separate data preparation for SOFR 3M Future valuation vs SOFR 1M Future valuation considering different handling of non-business days (use SIFMA holiday schedule)
- ▶ Highlight FOMC rate jump dates

Model Price for SOFR Futures

- ▶ Specify a model for forward dynamics (incorporating jumps on FOMC meeting dates)
- ▶ Price the CME SOFR Futures under specific averaging and non-business day handling needs for 1M and 3M Futures
- ▶ The rates used in the calculation will be a hybrid of realized SOFR rates and forward rates from the model

FOMC Jump dates	θ
	4.290% → θ_0
3/20/2025	0.028%
5/8/2025	-0.122%
6/20/2025	-0.175%
7/31/2025	-0.097%

- ▶ Minimize the squared error between Market quotes and Model based Prices
- ▶ Include a regularization term to penalize high values of jumps (even out jumps on FOMC dates)

Objective

$$\min_{\theta} (p^{mkt} - p^{fitted})^2 + \lambda \sum \theta_i^2$$

$$\lambda = \text{10}$$

$$\text{Obj} = \text{0.019667}$$

Generate Forward Curves

- With the risk-neutral calibration of the forward rates, we can generate 1M, 3M and 6M SOFR forward rates
